【About MJI】

MJI Robotics is a startup company founded in July 2015. We develop communication robots and AI systems with the aim of making a better world for people and robots alike. MJI stands for "More Joyful Innovation", we aim to make innovative technologies for a brighter future. You have a friend in robots and the possibilities are limitless.

Current business case1 <Medial communication robot>

Four companies; MJI, a robotics startup, Wacon Co., a home-care service startup, NTT DATA Kyushu, one of the biggest Communication data/Slr company in Japan and NTT Docomo Kyushu, one of the biggest communication carriers, are collaborating in the development of the communication medial robot "anco".

All this in the hope of developing a fleet of DoCoMo’s “AI” agent who can gather information from users at home through vital signs measuring instruments. Instruments such as thermometers, blood pressure monitors adapted for the robot “anco”, which possess both vital measurements and diagnosis functions.
【Our vision】
The rise of AI systems and robots in all facets of our lives is now imminent. May it be through smartphones or intelligent home devices, our living environment continues to change day by day. We look at the future with an open mind and we embrace the positive changes robots will bring to our everyday lives, these changes will come with a price but it is up to us to make the difference in this new society. We want to be part of it, and you can too!
Let's work together to make this world a better place and forge a society where robots are not ostracized but beloved.

Everyone is its own special little snowflake, and we all have different lifestyles and deal with our emotions in different ways. Communication robots equipped with artificial intelligence, facial recognition and behavior pattern recognition are better equipped than humans to deal with the wide range of lifestyles people have.
Forgetful at times? One thing robots are especially good at is memory! They never forget anything, and there is a special place for you in their memory space.

Do you want to keep an eye on loved ones? Too busy to be always present? Robots can be a good substitute to look over for loved ones, monitoring their status making sure they are well, and always allowing you to stay in touch with them.

The development of such Japanese communication robot is already at hand. MJl's robots are somewhat like a family and friends at time. Always there to offer the best of themselves, and make this loving tie between humans and robot grow every day!

【Recruitment】
We are looking for motivated individuals to join our team. Let's bridge the gap between R&D of Machine Learning and actual practice in our life!

< Position> Machine Learning Engineer
The candidate will be a part of a development team, and they will be in charge of the following tasks:
- Developing AI modules for our communication robot "Tapia" using the state-of-the-art techniques
- Improving the existing AI modules
- Maintaining the web API
- Developing AI modules for medical projects
